Ultrasound Guided Diagnosis & Treatment Now Available At RehabOne!

What is Ultrasound?

A non-invasive and painless imaging technology that uses sound waves to create images of tendons, ligaments, muscles, and nerves to diagnose and treat a variety of conditions.

Benefits:

- More precise evaluation that is done at rest and during movement
- Performed in office with no special scheduling required
- More comfortable and quicker than CT and MRI
- No radiation exposure and safe to use during pregnancy
- Better safety and efficacy since injections are performed with direct visualization of blood vessels and nerves
- No limitations due to metallic surgical hardware

Common Conditions:

- Tendonitis and bursitis
- Ligament sprains and muscle strains

Locations:

San Jose
Los Gatos
Gilroy
Salinas
Monterey

- Tendon and ligament ruptures
- Ganglion cysts and joint swelling
- Carpal tunnel syndrome and other nerve entrapments
- Tennis elbow and patellofemoral syndrome
- Rotator cuff and meniscus tears
- Arthritis and muscle spasms
